The diagram illustrates the iterative process of computing a message digest. It shows a sequence of 10 blocks, each 100 bits long. The first block is padded with zeros to 100 bits and then processed by a compression function to produce a 100-bit digest. This process is repeated for the remaining blocks, with each digest being padded and processed to produce the next digest, eventually resulting in a final 100-bit digest.

[illegible]

A handwriting practice sheet with ten rows of boxes. Each row contains 26 boxes, one for each letter of the alphabet. The first row is pre-filled with the letters A through Z. The remaining nine rows are empty for practice.

A grid of 10 rows and 20 columns of empty boxes for handwriting practice. The boxes are arranged in a uniform grid, with each row containing 20 boxes and each column containing 10 boxes. The boxes are intended for students to practice writing their names and other text.
